The Health in Sudan

Dr. Hashim Hassan Abbas Alamin

Doctor Hashim's Private Clinic

Abstract

Sudan faces Health Problems, there was no any development and progress in different types of professional or technical or disciplines because of which there was clear deterioration in the economy.

Sudanese are suffering from shortages in getting simple human right to live such as how to get water supply, electricity, foods and even children cannot find chances in school to be educated and to be involved in a health center or hospital unless their parents pay much money.

Now a day all disease which has been eradicated in ancient times started to recur and spread in several areas around Sudan such as Cholera - yellow fever - denger fiver tuberculosis - Chucungonia - measles - varicella and hepatitis A, and this is due to environmental contamination and poor health services.

From all times mentioned , I could say health in Sudan is going down although Sudanese Doctors and all medical staff are they qualified but no facilities for developing more .

Basic health services are very poor, and the government corporation and even the ministry of health have no interest responsibility for acting upon this shortage and deterioration.

I hope we try to change all these difficulties by new plans and system to develop and the rehabilitate health services for a new era and to create a good atmosphere for Sudanese citizens and even for future for children and adolescents and all the people in Sudan.

Keywords: Ancient, Disease, Environmental, Contamination, Services.
