

Community Perception Regarding Covid-19 Vaccinations A Cross-Sectional Study in Mogadishu- Somalia

Mohamed Hassan Mohamed¹ Ismail Ibrahim²

Lecturer at the Public and Environmental Health, Somali International University

Abstract

Vaccine hesitancy could pose a hazard to global public health, since there has been an unprecedented global effort to produce a vaccine to combat the COVID-19 pandemic. The outbreak and communicable of the virus has not only affected the population of many families, but has also disrupted the economy and development of the nation. Several vaccines are accepted to fight against coronavirus disease (COVID-19) and administered globally in several regions. Hesitation in administering vaccine poses a serious challenge in achieving immunity coverage to a wider population.
