

Digital Education In Africa (Problems And Solutions)

Eltayeb Ibrahim Himaida

International institute for English language, Sudan

Abstract

Technology _based distance learning is becoming popular through out the world. In sub_suhran Africa advancements in communication technology more than two decades ago raised much hope since technology based _distance education was seen as a promising coast affective and coast efficinet answer to expansion of access to education.

This in the high hopes in technology-based distance education however, turned disillusionment because of the challenge relating to digital infrastructure affecting most of sub_suhran Africa. This article is reflection on the challenge in digital infrastructure with respect to distance learning in Africa the article makes some recommendations for practice and research.
