Education for the Future of Workforce with Human and AI Co-workers

Dr. Narine Hall
Champlain College and InSpace Proximity, USA

Abstract

It is no secret by now that generative AI acts at a scale so large that it will transform how we learn, work together and how we relate to technology in general. We are already seeing wide applications in fields like marketing and customer success. The real question is what does the future of work look like in a new AI accelerated workforce and how do we create a perfect marriage between pedagogy and technology to upskill students and workers for this new AI accelerated environment. In this talk we will explore the opportunities that AI provides to create flexible and engaging learning experiences at scale using human centered and AI-powered pedagogy and technology.

Keywords: AI, human centered design, future workforce, upskilling
