Abstract

Food, food and food! It's the life wire of all living beings be it humans or plants all stems from agriculture. To be have a good harvest, many factors play active roles such as good arable land, Human Resources and environmental factors. All these phenomena are interwoven and only human can adjust to meeting the desired output. One of which is weather constraint which human needs to prevent, control and conserve in line with the adaptive environmental strategies applicable to this and that.
