AI: From Denial To Unconditional Love

Julia Baketova

Smolensk State University, Russia

Abstract

The unique use of AI to teach grammar: how to generate characters which represent different grammar tenses. Students don't learn the classical way of grammar, we make our own characters using AI. For example, we don't deal with "The Present Perfect", we deal with "John the Boaster" who is a naughty kid, who boasts a lot about his adventures and tells stories about what he has done. Thus, the students don't learn the rules by heart , they remember our funny stories and hilarious pictures which we make with them using AI. This method facilitates the revision before the test, enables me to create various further activities and is brand new.

Keywords: artificial intelligence, characters, creativity, grammar rules, technologies, tenses
