

Learning Math through Real World Experiences

Lakshmi Saravanan

American International School Chennai, India

Abstract

Teaching math to middle school students can be fun and at the same time challenging since they cannot relate to it. This presentation will talk about practical applications of math such as investing in Stock Market Project and in Building an Eco-Friendly Community. While it is exciting to do real world projects, it is important to link the units of study to the projects. This presentation will also show how all units of study can be linked to the projects.

Keywords: eco-friendly, math, practical applications, real life, stock market
