Human Dimensions of Climate Change Phenomena: Implications for Adaptation and Mitigation Endeavors in Urban Settings in Africa

Eshetu Alemu Jilcha

World Vision International, Ethiopia

Abstract

Climate change poses critical risks for African cities, where rapid urbanization intersects with socio-economic inequalities and weak institutional capacity. While scientific and technological solutions dominate adaptation and mitigation discourse, the human dimension-encompassing social equity, cultural values, behavioral change, and governance-remains underexplored. This paper examines how human factors shape the success or failure of climate actions, emphasizing the need for inclusive, participatory, and context-sensitive approaches. Drawing on interdisciplinary research, it argues that climate strategies must integrate local knowledge, address social vulnerabilities, and promote justice to be truly sustainable.
